Summary

This document will instruct you on how to upgrade to SQL Server 2017

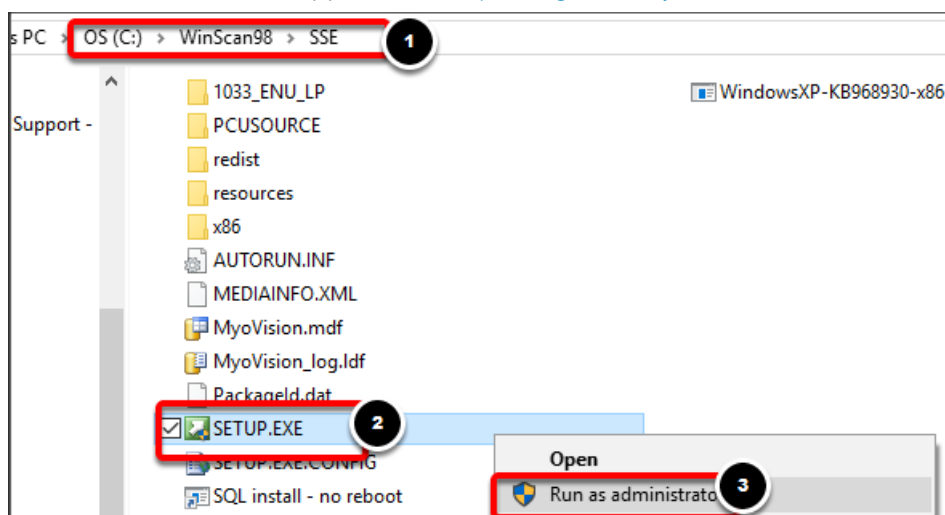

Before you Begin

1. Make sure the Windows account you are logged into has Administrator privileges
 - Check [Administrator Privileges](#) if you are unsure.
2. **IMPORTANT:** Make sure Windows OS is fully updated before installing MyoVision.
 - To check if you are fully updated, go to the Microsoft support article here:
<https://support.microsoft.com/en-us/help/4027667/windows-10-update>
3. **IMPORTANT:** Backup your database prior to upgrading SQL Server.
 - Not sure how? See our support article [Backup and Restore a Patient Database](#)
4. If you don't have SQL installed already, please refer to our support article [Install SQL Server 2017](#)

How to Upgrade Your SQL Server

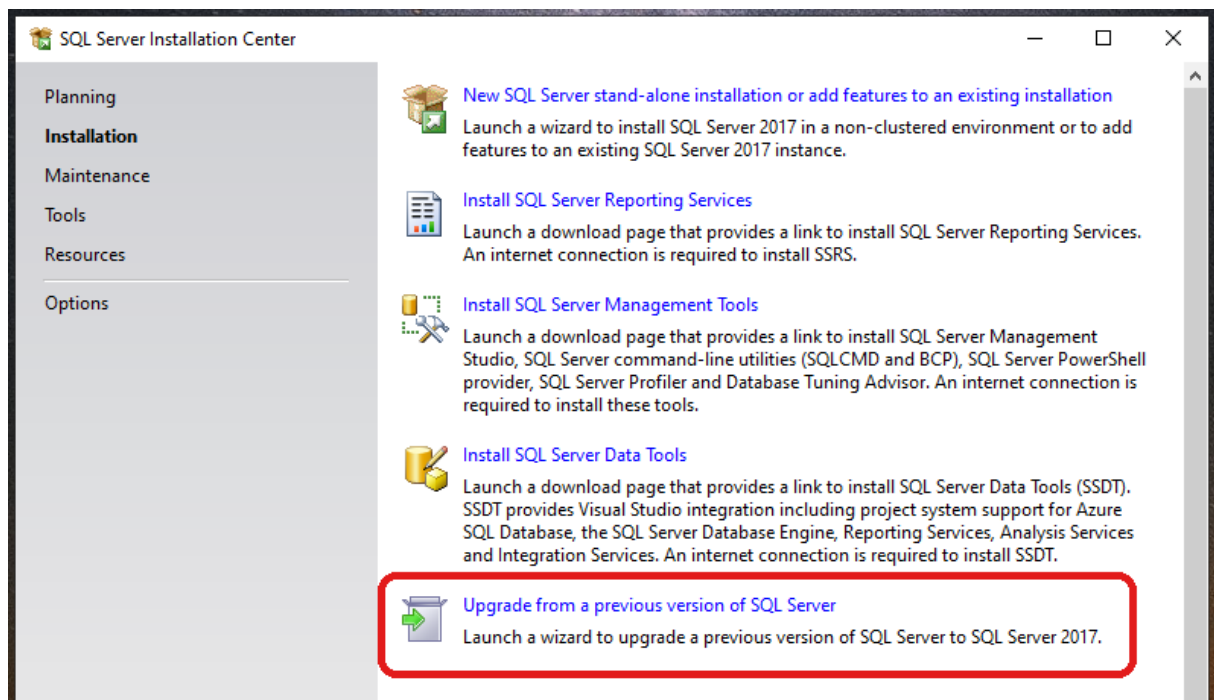

1. Run SQL Server Setup File

- Navigate to **C:\WinScang8\SSE** (do not use SSE2014). Right-click on "SETUP.EXE" and select "Run as administrator"
 - If you do not have the **SSE Folder** then you will need to update your software first
 - Not sure how? See our support article [Updating Your MyoVision Software](#)

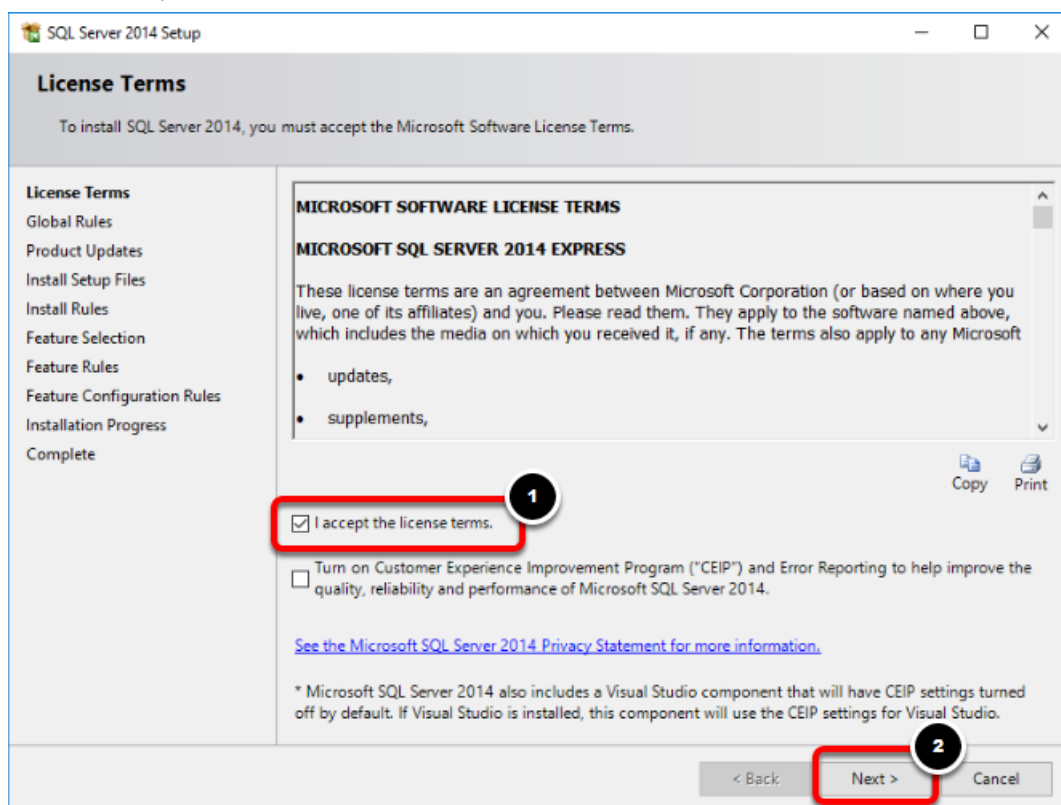

2. Select Installation Type

- Once the Installer opens, select the "Upgrade from..." option
- **IMPORTANT NOTE:** Make sure you are updating to SQL 2017 and not SQL 2008. If the installer window says SQL 2008 then rename the SSE folder to SSE2008 and then download and run the MyoVision installer to install the proper SQL Setup files.
