

Thermography - Line and Bar Style Results

Last Modified on 05/11/2018 4:37 pm PDT

There are two ways to display the data gathered during a thermography exam. The results can be set to either **Line** or **Bar**. This setting can be changed by clicking on the corresponding tab in the upper-right corner.

- **Line** displays the data as blue vertical bars.
- **Bars** display the data as series of horizontal bars coming from the site measured.

Click on the buttons inside the tabbed menu for examples of **Line** and **Bar** results:
